

## Construction Update

New blue pipe...**more than 1,650 feet of Desal Link pipeline** has been installed on the first three blocks of Garden Street between Mission and Valerio Streets. Initially, crews were encountering delays due to large boulders and a significant amount of historic trolley tracks under the street. Having dealt with those issues, construction is moving down Garden toward Alameda Park (see the timeline map).

**Upcoming Areas:** Garden Street by Alameda Park (mid-February and March)

**Kid's Views:** Kids can see big diggers, large pipes, and an active construction site from the safety of Kids' World from mid-February to March.

## Project Overview

This project will add a new underground desalination pipeline between the Charles E. Meyer Desalination Plant and water mains connected to the Cater Water Treatment Plant. The purpose of this new pipeline is to connect our community water sources and provide access to desalinated water for our entire service area.

Most construction will occur weekdays between 7:00 a.m. and 5:00 p.m. Please note that parking restrictions are in place to enable construction. Parking is open at night, on weekends, and over holidays.

Historic cable car train tracks were uncovered during the project.
